

Garber 3 and 5 foot Seeder-Fertilizer Spreaders

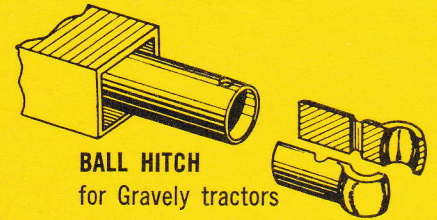

DATA SHEET: No. 21
MODELS: 36-72, 72-GD

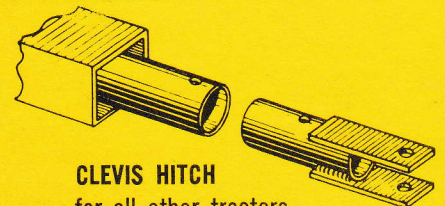

Models 36-72 and 72-GD

... equipped with 4:00 x 8 two-ply tires

2 HITCHES TO FIT ANY GARDEN TRACTOR

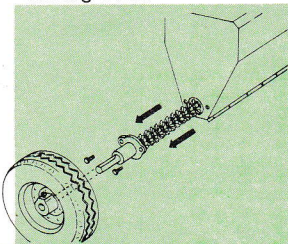

BALL HITCH
for Gravely tractors

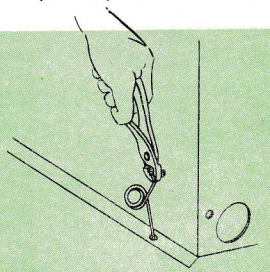

CLEVIS HITCH
for all other tractors

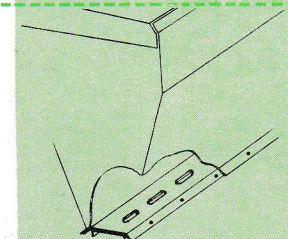

The agitator can be pulled for cleaning by simply removing a set screw and two bearing bolts.

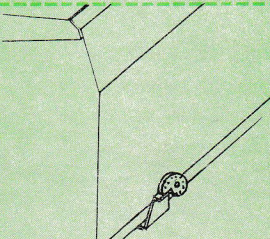

Gate is easily removed by releasing control springs with a pair of pliers.

Precision control of even the most difficult materials to be sown is provided by slotted holes placed every 1 3/4".

Application guide is easily set—gives exact control over seeding or spreading rate.

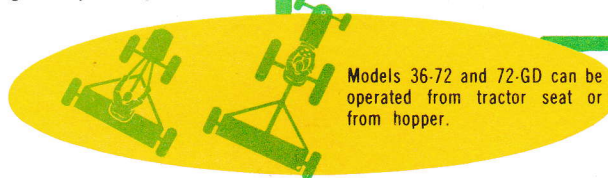

The Seed Easy 36-72 and 72-GD seeder-fertilizer spreaders attach to the drawbar of any garden tractor (rider or non-rider type) . . . or any small farm tractor. They sow seed or spread fertilizer evenly and uniformly—can be used to spread salt for ice and snow control work—and are ideal for use on small truck farms, estates, city parks, golf courses, boulevards and numerous other locations.

Operation is simple and trouble-free on both models. The application guide located on the back of hopper gives exact control over seeding and spreading rate—is easily set to sow from 1 to 6 lbs. of grass seed or to spread from 1 to 8 lbs. of fertilizer per 1000 sq. ft.—stays firmly in position. The slotted openings on 1 3/4" spacing assure uniform, blanket distribution—regardless of rate of distribution or type of material. The quantity con-

trol handle is easy to reach from either hopper or tractor seat—is positive in operation—and is not subject to friction or linkage variations in the opening and closing action.

Cleaning is easy and thorough. The exclusive ripple designed disc type agitator can be pulled for cleaning by removing a set screw and two bearing bolts. The gate can be easily removed by releasing the control springs with a pair of pliers.

Both models are constructed entirely of arc welded steel—are equipped with 4:00 x 8 two-ply tires—and can be furnished with either a ball hitch, designed for use with Gravely tractors—or with a standard clevis hitch, designed for use with all other tractors. Model 36-72 has a fertilizer capacity of 180 lbs. and Model 72-GD has a capacity of 300 lbs.

Models 36-72 and 72-GD can be operated from tractor seat or from hopper.
