

GRAVELY BULLETIN

sales information

BULLETIN NO: 573
DATE : May 20, 1955
TO : All Distributors and Dealers
SUBJECT : New STEERING Sulky!

The pictures with this bulletin were taken of a production model STEERING Sulky which we plan to put into production as quickly as possible. This sulky is an outgrowth of the original GOC Riding Sulky formerly made and sold by the Gravely Ohio Company. The orders that Gravely Dealers have placed with Gravely Ohio Company for their GOC Sulkies have been forwarded to us and will be filled from Dunbar as soon as our new sulkies are available.

We believe that this Sulky will make a great difference in the amount of Industrial Sales we can make with Gravely equipment. It competes with--and, we believe, excels any other Gang Mower and Sulky combination on the market today for ease and accuracy of handling, safety, and general utility.

We recommend it for use with the Gangs. It makes handling them so easy a child can operate the equipment.

PRICE AND DELIVERY

This bulletin is for your information only! We are not yet at the point where we can announce a suggested price. We are not yet in production.

You will be kept informed by bulletin as to price and delivery date as we progress in production.

FEATURES:

1. **EASY HANDLING:** You steer the Gangs with light pressure on the Steering Wheel. Takes less effort than moving an automobile steering wheel.
2. **ACCURATE WORK:** The Steering Radius is such that you can mow with unexcelled accuracy. . . trimming operations, mowing along sidewalks, etc. , is done accurately and easily.
3. **STEERING WHEEL:** Easy operation and work, because the steering wheel guides the equipment in the same manner as an automobile steering wheel. Turn the wheel right to turn right, left to turn left. A few minutes practice and you can do tricks with the Gangs.

4. **MANEUVERABILITY:** Increased amazingly. You can mow around a circle 18 inches in diameter, at full speed, with this Steering Sulky!
5. **SAFETY:** The Sulky swivel is constructed so it is impossible to strike the operator's hands or legs with any part of the mechanism when he is sitting correctly in the comfortable Sulky Seat. The Swivel Action of the Sulky is in the Wheels of the Sulky. . . the operator is fixed in relation to the Tractor.
6. **INCREASED TRACTION:** By using this Steering Sulky, the Gangs can be sold with Dual Wheels which increase the Tractor Traction, and spreads the weight over a greater area, which is advantageous in park, cemetery, and large lawn work.

To summarize--we believe we have the answer to any competition in the industrial mowing field. The Gravelly Tractor with this Steering Sulky will outmaneuver and outperform any other equipment in its horsepower range.

STOLEN TRACTOR:

- 1 "L" Tractor #83735
- 1 Sulky
- 1 Flat Knife Mower
