

Need Another Hand When You're Plowing or Mowing?

## Get a GRAVELY • GOVERNOR •

Adjusts the flow of power  
to the job—Automatically!

Yes, it's just like having another hand to feed the gas automatically to the job--leaves you free to maneuver the machine to get the best possible results with the least fuss and bother.

If the work is hard, the Governor automatically feeds more gas gradually to the motor. As it eases up, the gas is automatically cut down. You save gas, because you never feed more than necessary to do the job right.

### Saves wear and tear on your engine

You know that racing your motor wastes gas, and injures your engine. Any piece of machinery will wear faster if it is accelerated without a load on the engine. You save wear on your GRAVELY with the Governor because your engine speed automatically drops when the load is taken off the power tool.

There are times when you are working when you 'just don't have time or room to adjust the gas, maneuver the machine and operate the gears simultaneously. You'll find the Governor really comes in handy...it's like having an extra hand!
